FORMULA **500**

Honda Continuously Variable Transmission Fluid

Formula 500® Honda Continuously Variable Transmission (CVT) Fluid is a premium full synthetic transmission fluid specifically designed to be used in Honda continuously variable transmissions.

Honda's Continuously Variable Transmissions use both a wet start-up and torque converter system which require unique frictional properties to operate correctly. Many multivehicle or universal CVT fluids do not meet this frictional requirement and have the potential to damage the transmission.

Formula 500® Honda CVT fluid was developed specifically to meet the requirements of the Honda specification. This fluid should not be used in other CVT applications. Always follow manufacturer's recommendations for proper type of transmission fluid.

Typical Properties:

Product: Formula 500 Honda CVT Fluid	
Product Code	90341
Kinematic Viscosity @ 100 °C cSt (ASTM D-445)	6.9
Brookfield Viscosity @-40C (ASTM D-2983)	11,400 cP
